2 million fake comments were filed in the @FCC's #NetNeutrality comment process using the stolen identities of real Americans.

We still need to get to the bottom of this potential impersonation, which is a crime under NY law. My office is continuing its investigation.

It is the same Fake News Media that said there is "no path to victory for Trump" that is now pushing the phony Russia story. A total scam!

ittybittypography I decided I would have a go at reposting this image (third time) I started to type some "censored" text to pop over it but then I looked at the image and thought what am I censoring? Either a midwives hand or a babies head? This image is still floating around on Instagram on pages that have shared it, please let it stay in my feed too, as its my image.

Please keep this image here, please don't report it, it is birth, it is natural, it is beautiful. Look at this gorgeous squishy baby half born earthside, with amniotic fluid dripping from his nose (this photo has been flipped and cropped on the hope no one can find it offensive) Birthed at home by his amazingly strong mama, 🍓 One from the archives - Shared with permission by the parents. #ittybittypography #ittybittypography #hobart #tasmania #birth #labour #born

Very little pick-up by the dishonest media of incredible information provided by WikiLeaks. So dishonest! Rigged system!

Deleted Clinton email: Colin Powel warns Hillary Clinton to be "very careful" to not get caught hiding her emails [wikileaks.org/clinton-emails ...](http://wikileaks.org/clinton-emails)

However, there is a real danger. If it is public that you have a BlackBerry and it is government and you are using it, government or not, to do business, it may become an official record and subject to the law. Reading about the President's 88 rules this morning, it sounds like it won't be as useful as it used to be. Be very careful. I got around it all by not saying much and not using systems that captured the data.

I hope people are looking at the disgraceful behavior of Hillary Clinton as exposed by WikiLeaks. She is unfit to run.

1. The first step in the process of creating a new product is to identify a market need. This is often done through market research, which can involve surveys, focus groups, and other methods of gathering information from potential customers. Once a market need has been identified, the next step is to develop a concept for a product that meets that need. This is often done through brainstorming and sketching. Once a concept has been developed, the next step is to create a prototype. This is often done using 3D printing or other manufacturing techniques. Once a prototype has been created, the next step is to test the product. This is often done through user testing, which involves having potential customers use the product and provide feedback. Once the product has been tested, the next step is to create a business plan. This is often done by outlining the costs of production, the pricing strategy, and the marketing strategy. Once a business plan has been created, the next step is to secure funding. This is often done through crowdfunding, venture capital, or other sources. Once funding has been secured, the next step is to manufacture the product. This is often done through a contract manufacturer or a small-scale production run. Once the product has been manufactured, the next step is to distribute it. This is often done through a distributor or a direct-to-consumer sales channel. Finally, the product is launched into the market.

1. The first step in the process of creating a new product is to identify a market need. This involves conducting market research to understand the preferences and behaviors of potential customers. Once a need is identified, the next step is to develop a concept that addresses this need. This concept should be innovative and differentiated from existing products in the market.

2. After developing a concept, the next step is to create a prototype. This allows the development team to visualize the product and test its functionality. The prototype should be built using the most appropriate materials and manufacturing techniques to accurately represent the final product.

3. Once a prototype is created, the next step is to conduct a feasibility study. This study evaluates the technical, financial, and market viability of the product. It involves assessing the resources required for production, the potential costs, and the competitive landscape. This study helps to determine if the product is worth pursuing further.

4. If the feasibility study is positive, the next step is to develop a business plan. This plan outlines the marketing strategy, distribution channels, and financial projections for the product. It serves as a roadmap for the development and launch of the product, providing a clear understanding of the resources and timeline required.

5. The final step in the process is to launch the product into the market. This involves manufacturing the product at scale, implementing the marketing strategy, and distributing the product through the chosen channels. Monitoring the product's performance in the market is crucial to ensure it meets customer expectations and achieves the desired sales targets.
